

Bitfury Is Upgrading its Pool, Testing AsicBoost Technology

AMSTERDAM, April 30, 2018 – The Bitfury Group today is pleased to announce acquiring a license to use AsicBoost technology by joining the Blockchain Defensive Patent License.

We are planning to support fully transparent “version-rolling” AsicBoost in our next-generation Bitfury miners, which enables us to increase mining efficiency without any negative effects on the Bitcoin Blockchain.

For now, we have added “version rolling” Stratum protocol extension support to our pool and are performing some tests with AsicBoost-enabled ASIC prototypes.

This Offering Announcement is issued by Bitfury B. V. (“Licensor”). All capitalized terms herein have the meaning as defined in the applicable version of the Blockchain Defensive Patent License.

Bitfury B. V. (“Licensor”) commits to offer any patents we have under the Blockchain Defensive Patent License version 1.0 or greater (“License”) to any BDPL User.
